bringing together many results previously scattered throughout the research literature into a single framework this work concentrates on the application of the author's algebraic theory of surgery to provide a unified treatment of the invariants of codimension 2 embeddings generalizing the alexander polynomials and seifert forms of classical knot theory

this festschrift is dedicated to professor sjouke mauw on the occasion of his 65th birthday prof mauw obtained his phd from the university of amsterdam and subsequently held faculty and research positions at eindhoven university of technology and at centrum wiskunde informatica cwi in amsterdam he has collaborated closely with researchers around the world including colleagues in australia norway singapore and many other countries since 2007 he has served as a full professor at the university of luxembourg where he leads the security and trust of software systems group a passionate advocate of rigorous formalization prof mauw specializes in formal methods for information security he laid the mathematical foundations for attack trees a practical and widely

used security assessment framework and he contributed extensively to the development of theory and tools for the specification and automated verification of security protocols many members of sjouke mauw s scientific family have contributed to this volume to honor a distinguished advisor exceptional mentor and outstanding educator

this book gives a comprehensive overview of recent advances in retrovirology as well as general concepts of molecular biology of retroviral infections immunopathology diagnosis and prevention to current clinical recommendations in management of retroviruses including endogenous retroviruses highlighting the ongoing issues recent advances with future directions in diagnostic approaches and therapeutic strategies

the aim of the present book is to comprehensively review current advances in understanding of genetics structural biology pharmacology of potassium channels and their roles in disease as well as to identify current gaps in knowledge the ultimate goal is to provide a scientific foundation for better understanding of modulatory mechanisms and pharmacology of potassium channels and to use this understanding to drive future drug discovery this book will be a must have for academic and industrial scientists interested in physiology pharmacology pathology and structure functional relationships of ion channels the book will also be helpful for lecturers and students in the college and university classrooms as well as for anyone interested in the state of the art in modern cell biology physiology and pharmacology

this book explores the role calcium signaling plays in cellular responses in almost all types of cells including airway smooth muscle cells this universal signaling may result from extracellular calcium influx and or intracellular calcium release which are precisely controlled and regulated by ion channels exchangers and or transporters on the plasmalemmal or sarcoplasmic reticulum membrane first several chapters detail calcium release channels ryanodine receptors and inositol trisphosphate receptors voltage dependent potassium channels transient receptor potential channels orai channels calcium activated potassium channels and calcium activated chloride channels well characterized sodium calcium exchangers voltage dependent calcium channels and calcium pumps are described also in depth over many chapters Ca^{2+} signaling can be expressed in Ca^{2+} sparks waves oscillations and global changes in intracellular Ca^{2+} concentration calcium in subcellular compartments cytosol sarcoplasmic reticulum mitochondria and caveolae also exhibit dynamic crosstalk many molecules including fk506 binding proteins cyclic adenosine diphosphate ribose reactive oxygen species rhoa kinases caveolin and integrins can modify and induce spatial temporal and compartmental variations of calcium signaling in addition calcium signaling can exhibit sex hormone and age dependent changes a number of chapters are dedicated to covering these diverse formats spatiotemporal characteristics multifaceted network and mathematical modeling of Ca^{2+} signaling neurotransmitters hormones growth factors inflammatory cytokines and other stimuli may lead to multiple cellular responses by inducing Ca^{2+} signaling in airway smooth muscle cells increasing evidence suggests that Ca^{2+} pumps and canonical transient receptor potential channels are essential for airway smooth muscle remodeling accordingly several chapters summarize recent advances in the studies of the key role of calcium signaling in physiological cellular responses as well as the development of asthma chronic obstructive pulmonary disease and other respiratory disorders

this book can form the basis of a second course in algebraic geometry as motivation it takes concrete questions from enumerative geometry and intersection theory and provides intuition and technique so that the student develops the ability to solve geometric problems the authors explain key ideas including rational equivalence chow rings schubert calculus and chern classes and readers will appreciate the abundant examples many provided as exercises with solutions available online intersection is concerned with the enumeration of solutions of systems of polynomial equations in several variables it has been an active area of mathematics since the work of leibniz chasles nineteenth century calculation that there are 3264 smooth conic plane curves tangent to five given general conics was an important landmark and was the inspiration behind the title of this book such computations were motivation for poincaré s development of topology and for many subsequent theories so that intersection theory is now a central topic of modern mathematics

this book provides a comprehensive guide for the analysis and design of anchor systems used for mooring offshore floating structures much of the experience is based on applications toward the offshore oil and gas industry but the substantial potential for offshore renewable energy systems is addressed the major types of anchors are described with respect to their basic design concept advantages and limitations appropriate framework for analysis and observed performance this book addresses all aspects of anchor behaviour related to anchor design including the installation performance load capacity deformation and structural integrity of the anchor itself coverage is also provided of appurtenant components of anchor systems in particular of anchor line chain mechanics in the soil and water columns much of the material presented represents relatively new developments including several new anchors which have been developed within the last decade so the book will provide a useful compendium of information is largely scattered in journals and conference proceedings this book is intended for engineers engaged in offshore geotechnics and marine engineers involved in mooring system and floating structure design while the analytical methods presented in this text have a strong theoretical basis the emphasis is on simplified computational formats accessible to design engineers
